Sutter**

Parliamentary State Secretary
for Environment, Nature
Conservation, Building and
Nuclear Safety

Kristina Sinemus

Hessian State Minister for
Digital Strategy and
Development

Mislav Malenica

Founder & CEO
MindSmiths

About the European AI Forum

The European AI Forum is an initiative of national AI associations that aims to set the agenda on how AI is approached in Europe, both in terms of policy and entrepreneurship. Following the success of the first European AI Forum held in June, the second edition aims to check in with policymakers in Brussels and Member States to examine new developments relating to AI in terms of digital and green policies and business uptake.

Panel 1:

“Strengthening European AI to compete worldwide”

To this day Europe falls short in providing a European equivalent to the big American and Chinese technology companies even though potential, expertise and knowledge are abundant. The panel will discuss possible future strategies, incentives and policymaking needed to push forth a competitive European AI.

Panel 2:

“A climate neutral continent - making Europe greener with AI”

This panel discusses the potential that lies at the application of AI to the challenges of climate change and environmental protection. It seeks to identify the framework needed for this objective, the possible ways of using AI in and for sustainability and evaluates what impact can be ultimately hoped for.

Panel 3:

“The state as the first client – a model to ignite Europe’s AI industry”

At the moment, European AI R&D is still in a fledgling state, largely due to a lack of critical mass of demand that is needed for the AI industry to flourish. To ignite the AI ecosystem, Member States have the potential to be the ideal first client by seeking AI solutions to some of the public sector’s key challenges.

The Forum will be held under the patronage of the Representation of the European Commission in Berlin.
